# The relationship between ISO and you: video transcript

**Why this matters to you**

Every Cisco employee plays a part in quality. But how does an ISO certificate connect to the work you actually do?

Let’s take a look.

The BMS Pyramid illustrates how high-level business requirements are translated into the policies, processes, and day-to-day activities that guide our work.

We’ll start at the top, with you, and work our way down to the foundation.

**You**

At the very top, there’s you.

Governance and accountability. Plan. Do. Check. Act.

All based on your role and responsibilities.

**Local certifications**

Next, local certifications.

These are the product, service, and geographic standards that apply to your work.

ISO 45000. ISO 14000. IECEx. TL 9000. ISO 22301. SaaS certifications. And more.

**Global policy, process, and tools**

Then, global policy, process, and tools.

This is where requirements become the lifecycles and tools your team works in every day.

The lifecycles include: Engineering CPDM, CX TAC, SCO QMOS, GBR, ERIM, STO, and so on.

And the tools: Docs, Box, SharePoint, DCP, SFDC, ESP, CCF, and others.

**Cisco core processes**

Next, Cisco core processes.

Embedded across the whole company, these are the processes every team shares.

Management review. Information management. Training. Corrective action. Change management. And internal auditing.

**Cisco Quality Policy and BMS framework**

Below that, the Cisco Quality Policy and the BMS framework.

This is how Cisco puts ISO 9001 into practice.

The framework is deployed company-wide, and it’s included in the Code of Business Conduct.

**ISO 9001 certification and Cisco ISO Policy**

And at the foundation: ISO 9001 certification, and the Cisco ISO Policy.

Certification attests to quality across all of Cisco.

And the policy mandates ISO 9001 adoption, worldwide.

**Alignment**

Alignment runs through every layer, in both directions, from the standard to you.

**Who looks after what?**

Now, who looks after what?

The top three layers are audited. These are the layers auditors examine.

The bottom three are owned by the Audit Team. They set the foundation that everything above depends on.

**How you contribute**

So what does this mean for you?

Every employee contributes in three ways.

Follow established processes.

Meet the requirements for your role.

And help improve the way Cisco operates.

The certification is the foundation. You are the peak. And the pyramid holds when you do your part.
